SCREENPILOT SYNTHETIC CV FIXTURE

This document describes a fictional candidate created only for deterministic demo testing.

Riley Vale

Junior software developer

Work arrangement to confirm

PROFILE

Early-career developer with mixed product experience across accessible web interfaces and small server-side services. Interested in learning through collaborative delivery and open to discussing the role direction that best reflects the candidate's goals. The CV does not establish an application or real vacancy.

EXPERIENCE

Completed a fictional six-month product internship supporting responsive workflow screens for distributed teams. Worked with a product designer to improve keyboard navigation, clarify empty states, and document interface behavior. Participated in collaborative code review and shared short progress updates with a remote team.

PROJECTS

Built a synthetic scheduling project with a browser interface and a small server-side service. Owned the interface flow, added a bounded service endpoint, and wrote a concise handover explaining broad responsibilities. The project is fictional and contains no real customer or employer information.

EDUCATION AND LEARNING

Completed generic computing studies and practical coursework covering web interfaces, data handling, teamwork, and responsible software delivery. Uses English regularly for project notes and distributed collaboration.

PREFERENCES

Looking for structured onboarding, mentorship, and room to grow. Work-arrangement and location preferences should be discussed without assuming an employer policy. Availability and compensation expectations should be confirmed during the conversation.
